

Power BI

Assignment 2

Basic Visuals in Power BI

SCENARIO

"TechnoEdge Learning Services wants to enhance their course offerings by analyzing their student course details data. Use Power BI to create basic visuals that highlight the most popular courses, training modes, and trainers. Explore the data and uncover insights that can inform decision-making and drive business growth. Share your Visualizations with the team and collaborate on strategies to improve course delivery."

TASK

1. Create a stacked column chart that illustrates the count of individuals by state and gender.
2. Create a pie chart showing the sum of paid amounts by course name.
3. Create a donut chart showing the count of gender by education level.
4. Create a Clustered Column chart showing the number of students enrolled in each course.
5. **A** Use the "Include" option to select only the highest education levels for further analysis
B Use the "Exclude" option to remove any education levels that have a low number of students.
6. How do you export data from a visual in Power BI?
